

Introducing Oxford Flow NANO Light cure flowable nano composite

Priming, Bonding, Filling with only one Material!

Oxford Flow SE is a flowable, light curing, radiopaque and self adhesive composite. It is the optimal solution for small class I fillings. It is also a perfect choice for lining with composites and as pit and fissure sealant. Oxford Flow SE has a reliable adhesion to dentine and enamel before and after thermocycling.

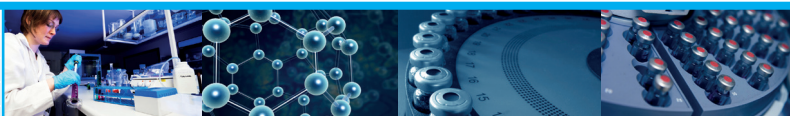

Features and Benefits

Features

- Adhesive and filling material in one product
- Not technique sensitive
- Optimal consistency
- Excellent polishability

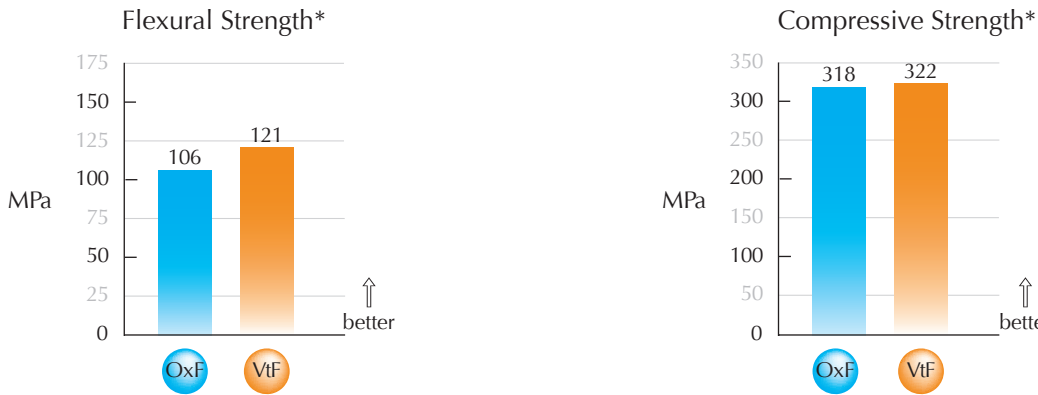

Benefits

- Time saving
- Easy application
- High reliability
- Ideal for each of the mentioned indications
- Excellent handling
- Very good esthetics

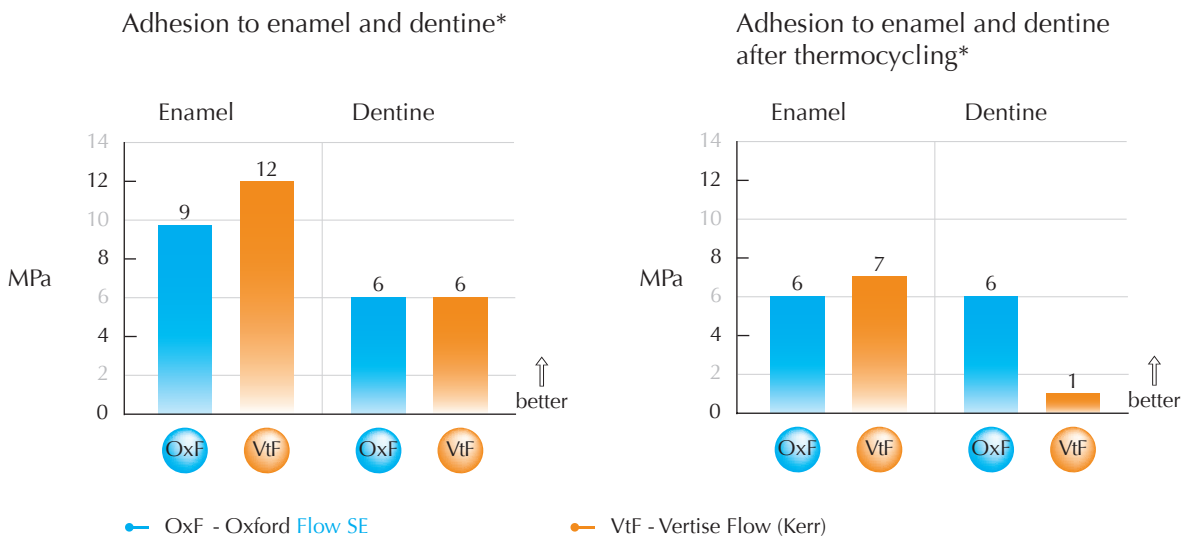

Oxford Flow SE: Light cure self adhesive flowable composite

Oxford Flow SE is strong and resistant

Oxford Flow SE has reliable adhesion
