

## Introducing Oxford Protect NANO Sealing varnish with triple fluoride formula

The quick and easy way to protect your patient's teeth!

Oxford Protect NANO is a silicone based single component protective varnish with nano-fluorapatite, nano-calcium fluoride and amine fluoride for the sealing of teeth.

Oxford Protect NANO is simple to apply without the need for etching or mixing. Oxford Protect NANO occludes open tubules and the triple fluoride formula is known for a perfect remineralisation assistance of the tooth.

### Features and Benefits

- Protects tooth surface (eg around brackets and where hygiene is difficult)
- Components known to remineralize the tooth structure
- To occlude open tubules to reduce sensitivity
- No mixing required - just shake before use
- No mixing pad waste
- Greater convenience
- No waste

# Oxford Protect NANO

Oxford Protect NANO: Triple fluoride formula

Oxford Protect NANO: Seals efficiently dentine tubules

Oxford Protect NANO: Triple fluoride formula

Dentine surface before

Dentine surface after

After the application, **Oxford Protect NANO** seals tooth surfaces and releases fluoride directly into the tooth substrate. **Oxford Protect NANO** contains approx. 0,25% fluoride.

Applying Oxford Protect NANO is as easy as 1 – 2 – 3!

- 1- Clean, polish and dry tooth before applying Oxford Protect NANO varnish.
- 2- Apply several coats in an even thin layer. Avoid contact with mucosa.
- 3- Let the varnish air dry for 1 minute or dry with a gentle stream of air.
