

## Introducing Oxford ZirBond One component agent for priming zirconia and metal surfaces

\*Data available upon request

## High bond strengths to zirconia, alumina and metal restorations

Oxford ZirBond is a one component agent for priming zirconia and metal surfaces. Developed to enhance the bond between metal alloys, zirconium oxide or aluminium oxide and methacrylate-based resins, it allows very high adhesion strength for long time restorations.

### Features and Benefits

#### Features

- High bond strength to Zirconia, Alumina and Metal restorations
- One component
- Versatile

#### Benefits

- Long lasting adhesive
- Convenient
- Bonds to all important prosthetic materials

### Ordering Information

**Oxford ZirBond, one component agent for priming zirconia and metal surfaces**

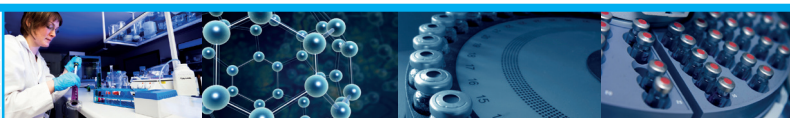

Includes: 5 ml Oxford ZirBond bottle
